Bill,
They look great. Both the layout and PWB departments at Cirrex contributed and so far everything looks really good. We are actually in the process of functional testing the 070 [REDACTED] board and I will let you know how things turn out. I am particularly pleased because we have a compatible database and it appears our layout engineers are going to have to increase the size of the board mounting holes to improve manufacturability of the top level assembly, (box). They will be able to do that because Cirexx used PADS to do the layout.
Thanks, Bill
