You did a board for us, for our trade show. The p/n was VS [REDACTED] and it had the back drilling (counter bores). Anyway Marty and some of the other engineers in the lab and were very, very impressed at the how close you guys hit the impedance and how uniform the transmissions lines were. I thought I would tell you because Cirexx got a lot of inside visibility for doing such a good job. This now resides with the Portland group, so you probably will be getting some orders for a few more soon.

Bob
